Leandro F. Juárez · Project

PresupuestAR, my own product

I designed, built and operate it myself, with the objective of letting professionals and trades create and send professional quotes in minutes and know when the client views and signs them.

LINKS

presupuestarapp.com www.youtube.com/watch?v=HcGEmoTAqLw

In detail

A side project I build for the pleasure of building: a web SaaS, in beta since 2026 and not yet officially launched, for professionals and trades to create and send professional quotes. The client receives a link, views the quote and signs it from the phone.

Features

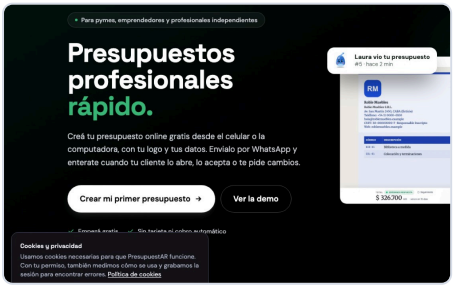

Quotes with a custom-designed PDF, delivery by link with notice when the client views and signs it, client signature, client data lookup by tax id (CUIT) through the ARCA API (the Argentine tax authority), business logos and identity, item import from spreadsheets and automatic backups. It has its own mascot, Presu.

Stack

Next.js · PostgreSQL with Prisma · Google Cloud Run with continuous deployment · PDF generation · ARCA API integration

In detail

It is my proof that I design, build and run software end to end, not only prototypes.
