Leandro F. Juárez · Project

This site

I developed it myself, with the objective of having a CV that can be questioned and answers only from my documented experience, and of showing in public how I work with AI and MCP.

LINKS

github.com/lfjuarez/lean-profile-agent

In detail

This CV is itself a project: a chat that answers only from my curated documents, with a citation to the document and section for every answer, plus a read-only MCP server that exposes the same knowledge base.

How it works

The base is a set of documents in Spanish and English split into sections; a lexical search (BM25) picks the relevant sections for each question; a language model answers from those sections only and cites them; when no section is relevant, the server declines without calling the model. The answer is streamed and the page marks which sections were read and which were cited.

Stack

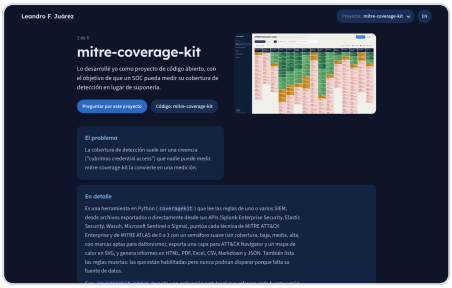

Python with FastAPI · custom retrieval · a configurable model provider (Gemini on its free tier or Claude) · an MCP server over Streamable HTTP with six read-only tools · per-IP rate limits and a daily cap · tests and continuous integration · deployed on Google Cloud Run under the domain leandrojuarez.info

In detail

The code is open at github.com/lfjuarez/lean-profile-agent.

The CV built from the same documents
